ABSTRACT

During the late spring, summer, and early fall of 1978, a comprehensive household survey of the adult population of Southeastern Connecticut was conducted by Mohegan Community College to assess the educational needs of this region's residents. The survey focused on respondent characteristics, educational background, employment information, level of satisfaction with regional educational opportunities, the accuracy of information adults possessed, the preferred sources of information, the level of interest and the reasons adults had in pursuing learning activities, the kinds of learning formats adults preferred, the obstacles that prevented adults from satisfying their educational needs, and the kinds of educational services adults expected to receive. A summary of the major findings of the adult educational needs assessment is included in this volume of the study report, as is a copy of the survey instrument itself. Additionally, the raw data from the study are provided in terms of the absolute and relative frequency of responses on the 96-item questionnaire. (AYC)

SUMMARY OF THE MAJOR FINDINGS OF THE ADULT EDUCATIONAL

NEEDS ASSESSMENT OF SOUTHEASTERN CONNECTICUT

INTRODUCTION

During the late spring, summer and early fall of 1978, a comprehensive household survey of the adult population of Southeastern Connecticut was conducted by Mohegan Community College to assess the educational needs of this region's residents. The findings of this study provide detailed statistical information regarding the level of satisfaction with regional educational opportunities, the accuracy of information adults possess, the preferred sources of information, the level of interest and the reasons adults have in pursuing learning activities, the kinds of learning formats adults prefer, the obstacles that prevent adults from satisfying their educational needs and the kinds of educational services adults expect to receive.

This summary only touches upon the highlights of the survey results. For a detailed analysis of all the questions and responses, interested persons are urged to examine the completed report.

LEVEL OF SATISFACTION

The overall level of satisfaction with existing educational opportunities in the region is exceedingly high with 69% of the respondents expressing satisfaction. Most respondents believe that their personal educational needs are being met. However, among the 29% who indicated dissatisfaction with existing educational opportunities, the following breakdown is of interest. 25% of the black respondents, 46% of the unskilled respondents and 24% of the respondents who are college graduates feel that existing educational opportunities are inadequate. Almost half of those surveyed representing all sub-groups of the sample perceive that the non-high school graduate is at a disadvantage when it comes to obtaining more education regionally.

ADULT DEMAND FOR EDUCATIONAL OPPORTUNITIES AND PUBLIC SUPPORT

The results of the survey suggest that the demand for educational opportunities among the adult population remains high throughout Southeastern Connecticut. Respondents strongly support the use of their tax dollars for providing educational programs for adults by a significant 86% of those surveyed.

More than 70% of those surveyed expressed interest in continuing their learning activities some time in the future. Those certain to enroll within the year include a greater number of urban residents as compared to suburban and rural groups, a significantly greater number of black and other minority respondents as compared to white respondents and a greater number of employed as compared to unemployed respondents. It is interesting to note that the unskilled respondents were least likely to enroll in an educational program within a year as compared to skilled or semi-professional or professional respondents.

Less than one percent of all the respondents cited opposition of friends or family or lack of instruction in their native language as barriers to participation. For those respondents currently enrolled in programs almost 15% said cost of programs was their major problem. Previous studies have indicated that former and current participation is a reliable predictor of future participation. If educational costs continue to increase, those most likely to benefit will be adversely affected.

ACCURACY OF INFORMATION

Throughout the study, findings suggest that residents of Southeastern Connecticut are seriously misinformed about available educational opportunities. A large majority of the respondents did not know the costs, locations, functions, policies and sources of information relating to the broad spectrum of educational programs and services offered throughout the region. For example: 41.8% of the respondents were unaware that adult basic education classes are free of charge. Almost 30% of those surveyed erroneously believed that Boards of Education can provide information on local college offerings. Almost 30% could not define the community college as a public, open admissions two-year institution. Many more examples can be cited to demonstrate the lack of accurate information among adults. Clearly a misinformed population is a distinct disadvantage when attempting to make educational decisions. Moreover, those most in need of additional educational opportunities were often the ones least likely to have accurate information.

EXPRESSED PREFERENCES FOR RECEIVING INFORMATION

A variety of ways can be used to communicate information about educational programs including newspapers, telephone, the mail, one-to-one counseling, employers, posters and catalogs. The top three preferences expressed by respondents for acquiring information are: 1) newspaper 2) mail and 3) counseling. This finding would suggest that more resources be developed to expand newspaper coverage of educational programs and services and that additional monies be allocated to increase the availability of educational counseling centers for all adults. A central clearinghouse might be established to develop a comprehensive mailing list for interested adults and participating organizations.

EXPRESSED PREFERENCES FOR LEARNING FORMATS AND LOCATIONS

Among the various methods of learning such as through lectures and classes, on-the-job training, TV or videocassettes correspondence courses, more than 1/3 of all respondents selected on-the-job training as the most effective way of learning. Lectures or classes were selected by the next largest percent of those surveyed. The only variation to occur among the sub-groups of the study was found among those whose incomes fell below $6,000. This sub-group ranked on-the-job training first, discussion groups second, and life experience third as preferences for learning formats. A strict reliance on traditional lecture classes would apparently reduce participation among the economically disadvantaged segments of the population.

Moreover, fewer women as compared to men are certain to enroll within the year despite the large numbers of females whose major occupation is that of homemaker. When analyzing the likelihood of enrollment with levels of education it is significant to note that a greater number with some college education are certain to enroll as compared to those with a high school diploma or those who have graduated college.

RELATIONSHIP BETWEEN EDUCATION AND EMPLOYMENT

The findings of the study support the view that the demand for educational opportunities among the adult population is closely linked to the need for occupational training and continuing education for career development as well as employment-related services. For example, more than 40% of the respondents expressed interest in courses such as nursing, data processing or carpentry for job-related reasons with even representation between both sexes. Those members of minority groups other than black also showed a significantly high interest in occupational programs.

More than 50% of the entire sample agreed that further education would be vital for their present of planned occupations. The healthy demand for occupational programs is accompaninied by an equally strong demand for placement services to be provided by the community college. Almost 84% of all respondents agreed that community colleges should help graduates find employment in their field. Accurate job information regarding the potential for employment would be of concern and interest to prospective students prior to their enrolling in occupational or vocational programs.

While interest in educational programs offering occupational training remains high, it was evident that many persons regard on-the-job training or internship programs as the least available educational opportunity in this region. A serious gap appears to exist between demand and supply in this area.

BARRIERS TO ADULT PARTICIPATION IN LEARNING ACTIVITIES

Despite the interest and demand for educational opportunities for adults, several barriers were cited as impediments to adult participation. Significant numbers of respondents representing all cross-sections of the population (with the exception of those aged 45+) cited child care problems as the number one obstacle to their pursuit of learning activities. Child care problems may explain why fewer women as compared to men are certain to enroll in educational programs within a year.

Other frequently noted barriers include family responsibilities and cost. Within the minority population, a greater percent, (almost 15%) cited cost as the chief obstacle to participation as compared to white respondents who cited child care and family responsibilities. Among the minority classified as "other" than black, a higher percent noted family responsibilities as their problem.

Respondents also preferred to attend educational programs held on college campuses as compared to other locations with the closest public school ranking a close second in preference. This region is served by several colleges with limited campus facilities. Therefore, its unlikely that this preference can be satisfied in the near future. However, expanded use of public schools for adult educational programming is a realistically achievable goal.

Home study was also noted as a preferred site for continued learning with nearly half of all respondents indicating that they would take a home study course. Females outnumbered males in their willingness to study at home. This again suggests that more females would be likely to continue their education if innovative home study programs were offered through television, correspondence or videocassettes by colleges and other educational organizations.

SUBJECT AREA PREFERENCES OF ADULTS

Although the questionnaire did not seek to identify specific course title preferences among adults, it did provide an opportunity for respondents to express interest in several broad subject area categories such as home and family subjects, business, humanities, natural sciences, etc. The subject area that generated the most interest among all respondents was "Home and Family or Personal Living Skill Course," with more than 60% preferring this subject area for reasons of personal interest. Females outnumbered males by almost 20%. Black and white respondents were equally interested in this area. However, rural residents exceeded urban residents in interest in this subject area. Similarly interest in home and family courses increased with age. Only veterans, military persons and those with an 8th grade education or less were more likely to be not interested when compared to others.

As a subject area, the humanities (such as literature, languages, philosophy) were popular among the whole sample. Most adults who preferred the humanities did so out of personal interest as compared to job related or college credit reasons. However, college credit remained a high consideration among many respondents.

Occupational courses, as mentioned earlier, remained an area of interest for more than 40% of all respondents. As a group, more of those with some college background preferred this area of study as compared to non-high school graduates or those with college degrees. This would suggest expanding opportunities for occupational programs within existing collegiate institutions.

Subject areas that were of no or little interest to almost 70% of all respondents included mathematics, natural sciences, and secretarial sciences. However, of those who were interested in these areas, many indicated college credit as their reason for participating in these subject areas. These areas were also of interest to minority groups including Blacks, American Indians, Hispanics, and Asian Americans.

The next two charts gave the respondents the opportunity to choose the two most important factors preventing them from continuing their learning activities.

65a. Which of the following might prevent you from continuing your learning activities?

(00) No response
(01) Child care problems
(02) Cost of program
(03) Programs available don't meet my needs
(04) Lack of confidence in my ability
(05) Transportation problems
(06) Health problems
(07) Amount of work required
(08) Family (home) responsibilities
(09) Lack of instruction in my native language
(10) Lack of information about programs
(11) Time programs are offered
(12) Friend or family doesn't like the idea
(13) Afraid I'm too old to begin
(14) I've been away from school far too long
(15) None of the above prevent my taking part in continued learning activities
(16) Not interested in continued learning activities

65A. Which of the following might prevent you from continuing your learning activities?

(00) No response
(01) Child care problems
(02) Cost of program
(03) Programs available don't meet my needs
(04) Lack of confidence in my ability
(05) Transportation problems
(06) Health problems
(07) Amount of work required
(08) Family (home) responsibilities
(09) Lack of instruction in my native language
(10) Lack of information about programs
(11) Time programs are offered
(12) Friend or family doesn't like the idea
(13) Afraid I'm too old to begin
(14) I've been away from school far too long
(15) None of the above prevent my taking part in continued learning activities
(16) Not interested in continued learning activities

Questions 66 to 85 were answered by respondents who expressed a desire to continue their learning activities. The questions dealt with in this section gave the respondents a chance to express their preferences concerning time, location and other things dealing with continuing their education.

66. How likely is it that you will enroll in an educational program within the next year?

(0) No response (1) Certain
(2) Possibly (3) Not Likely
